ABOUT ME

Data Science student with strong foundations in statistics, machine learning, and data analysis. I have gained seven months of experience as a Data Analyst, working with real-world datasets and applying analytical techniques to support data-driven decisions. I have also contributed to research projects including Smart Risk Scoring for Gig Workers and Credit Card Fraud Detection using Machine Learning. These experiences have strengthened my interest in predictive modeling and intelligent data systems. I aim to further develop my analytical and research capabilities through Post graduate studies in Data Science or Artificial Intelligence.

WORK EXPERIENCE

[04/08/2025 – 10/03/2026]

Data Analyst - Jobclassify

- Analyzed recruitment and candidate datasets to identify hiring trends and improve job-candidate matching efficiency.
- Cleaned, structured, and validated large candidate databases to ensure high data accuracy and reliability.
- Developed analytical reports and dashboards to support data-driven recruitment and placement decisions.
- Utilized Python, SQL, and Excel to perform data analysis, data preprocessing, and visualization.

EDUCATION AND TRAINING

B.Sc-Data Science

Viva College (Mumbai University) [02/06/2023 – 10/05/2026]

City: Mumbai | **Country:** India | **Website:** <https://vivacollege.org/> | **Field(s) of study:** Data Science | **Final grade:** 8.5 (4-10)

Courses: Machine Learning, Artificial Intelligence, Exploratory Data Analysis, Data Engineering, Computer Vision, Probability and Distributions, Calculus, Data Structures and Algorithms

Higher Secondary Education

Higher Secondary Maharashtra Board [15/06/2019 – 15/06/2021]

City: Mumbai | **Country:** India | **Website:** <https://vidyalaya.vidyavaridhi.com/> | **Field(s) of study:** Computer Science

PROJECTS

[10/09/2025 – 26/09/2025]

Smart Score Risk Prediction for Gig Workers

- Developed a machine learning model to predict accident risk for gig delivery workers.
- Built and processed a 300+ record dataset including work hours, sleep, delivery speed, weather, and shift conditions.

- Applied Logistic Regression and Random Forest to generate a risk score (0–100%) and evaluated models using Accuracy and F1-score.
- Identified key risk factors affecting driver safety using feature importance analysis.

Tools & Technologies: Python, Pandas, Scikit-learn, NumPy

[06/02/2026 – 10/03/2026]

Credit Card Fraud Detection Using Machine Learning

- Built a classification model to detect fraudulent credit card transactions from large financial datasets.
- Applied data preprocessing techniques to handle imbalanced datasets and detect anomalies.
- Compared multiple machine learning algorithms to improve fraud detection accuracy.
- Visualized transaction patterns to identify suspicious behavior.

Tools & Technologies: Python, Scikit-learn, Pandas, NumPy, XGBoost

Real-Time Social Sentiment Analysis for Brand Strategy

- Collected real-time social media posts from platforms such as Twitter and Instagram.
- Applied Natural Language Processing techniques to classify sentiments as positive, negative, or neutral.
- Used clustering methods to detect trending topics and brand perception patterns.
- Built dashboards for sentiment visualization and trend analysis.

Tools & Technologies: Python, spaCy, Transformers, R, Power BI, Tableau

Dynamic Supply Chain Optimization Using Predictive Analytics

- Developed predictive models to forecast product demand using historical sales data.
- Applied time-series analysis to identify trends and seasonal demand patterns.
- Integrated weather and shipment tracking data to improve demand prediction accuracy.
- Provided insights to optimize inventory management and reduce stock shortages.

Tools & Technologies: Python, Pandas, Time Series Analysis, Machine Learning
